Briefing:

- Describe a recent project you are working or you have worked.
- What are the important architecture decisions that were made?
- What type of application are you developing?
- How large is the development and the architect team?
- How many years of experience do you have as an architect?
- How much are you involved in the implementation phase?

Architectural Concerns:

- What aspects and concerns are important for you concerning these decisions?
- What aspects do you want to see in the source code concerning those decisions?
- What typical architectural violations do you often see in the implementation concerning those decisions?
- What kind of architectural rules do you define?

Enforcement activities:

- If you review source code, what are the specific steps when inspecting source code?
- What other strategies do you follow in order to enforce architecture decisions?
- Do you define formal rules for architecture? What type of rules are they? Do you check them automatically?
- How do you use architecture documents and models during the enforcement process?
